Books In Print® combines the most trusted and authoritative source for bibliographic information with powerful search, discovery and collection development tools designed specifically to streamline the book discovery and acquisition process. Books In Print® contains over 20 million global titles (in print, out of print, and forthcoming), including books, ebooks, audio books, and multimedia titles.

Libraries worldwide consult **Books In Print®** to find titles, create lists and decide which vendor, ebook platform, or online retailer to source the title.

Books In Print® is available in two subscription levels:

- **United States Edition** – Contains U.S. publications.
- **Global Edition** – Offers global coverage, including U.S., U.K., Canadian, European, and Australian publications.

Books In Print® is used every day by thousands of book professionals and library users to make connections.

NEWEST FEATURES INCLUDE:

Browse will assist library users in finding books based on authors, genres, or topics that interest them. Every query will return suggested titles, eliminating dead-end searches.

Character Search allows the user to search for a character from their favorite books and view search results for all titles the character appears in, and includes a brief synopsis of the character.

Find Similar allows users to see suggested similar titles based on search criteria, or they can search by specific tags found in Syndetics Book Profiles.

WHY BOOKS IN PRINT® IS THE LEADING BIBLIOGRAPHIC DATABASE FOR LIBRARIES, PUBLISHERS, AND RETAILERS AROUND THE WORLD:

- Largest bibliographic research
- Wholesaler stock availability
- Lists feature, to download a book list into inventory
- Online comparison pricing and buying options
- Displays View Inside Widget for easier browsing of purchasing
- Includes a mobile app and over 40 professional business solutions

BIC Breakfast 27th September 2017

EDI & Enriched Metadata:

Driving the efficiency of libraries into the 21st
century and beyond

Catherine Cooke

Westminster Libraries

EDI & Enriched Metadata – BIC Breakfast

- **What is EDI?**

- Electronic Data Interchange

- The direct communication of trading messages between computer systems, using national and international telecommunications networks
 - Electronic Trading using open systems, standard message formats and communications protocols
 - Effective management of supply chain

EDI & Enriched Metadata – BIC Breakfast

- **Orders**

- Self-explanatory
- Cornerstone of EDI
- The message most people seem to be using
- The vast majority of orders go EDI

EDI & Enriched Metadata – BIC Breakfast

• DAY	MANUAL	EDI
• Monday	Order placed	Order placed
• Tuesday	Printed and posted	Sent over EDI; vendor receives & loads
• Wednesday		
• Thursday		
• Friday }		Rec'd at vendor
• Monday }		Keyed into vendor
• Tuesday }		system

EDI & Enriched Metadata – BIC Breakfast

- **Quotes**

- Puts order on Library System when staff don't
 - Standing Orders
 - Shop Selections / Showroom Visits
 - Web site orders
 - Supplier Selection
- Return EDI Confirmation Order
- Maintains full audit and budgetary control
- Allows other EDI messages to follow

EDI & Enriched Metadata – BIC Breakfast

- **Invoices**

- Self-explanatory
- Manually building invoice at receipt is
 - time-consuming
 - prone to error
- EDI puts invoice on Library System before staff open the box
- Electronic copy invoice
- May also receipt stock

EDI & Enriched Metadata – BIC Breakfast

- **Receipting**

- Order Response message
 - “Order Fulfilment”
 - “Shelf-ready stock”
- Puts items on Library System before staff open the box
- Staff check paper invoice against box
- Discharge for reservations / shelves

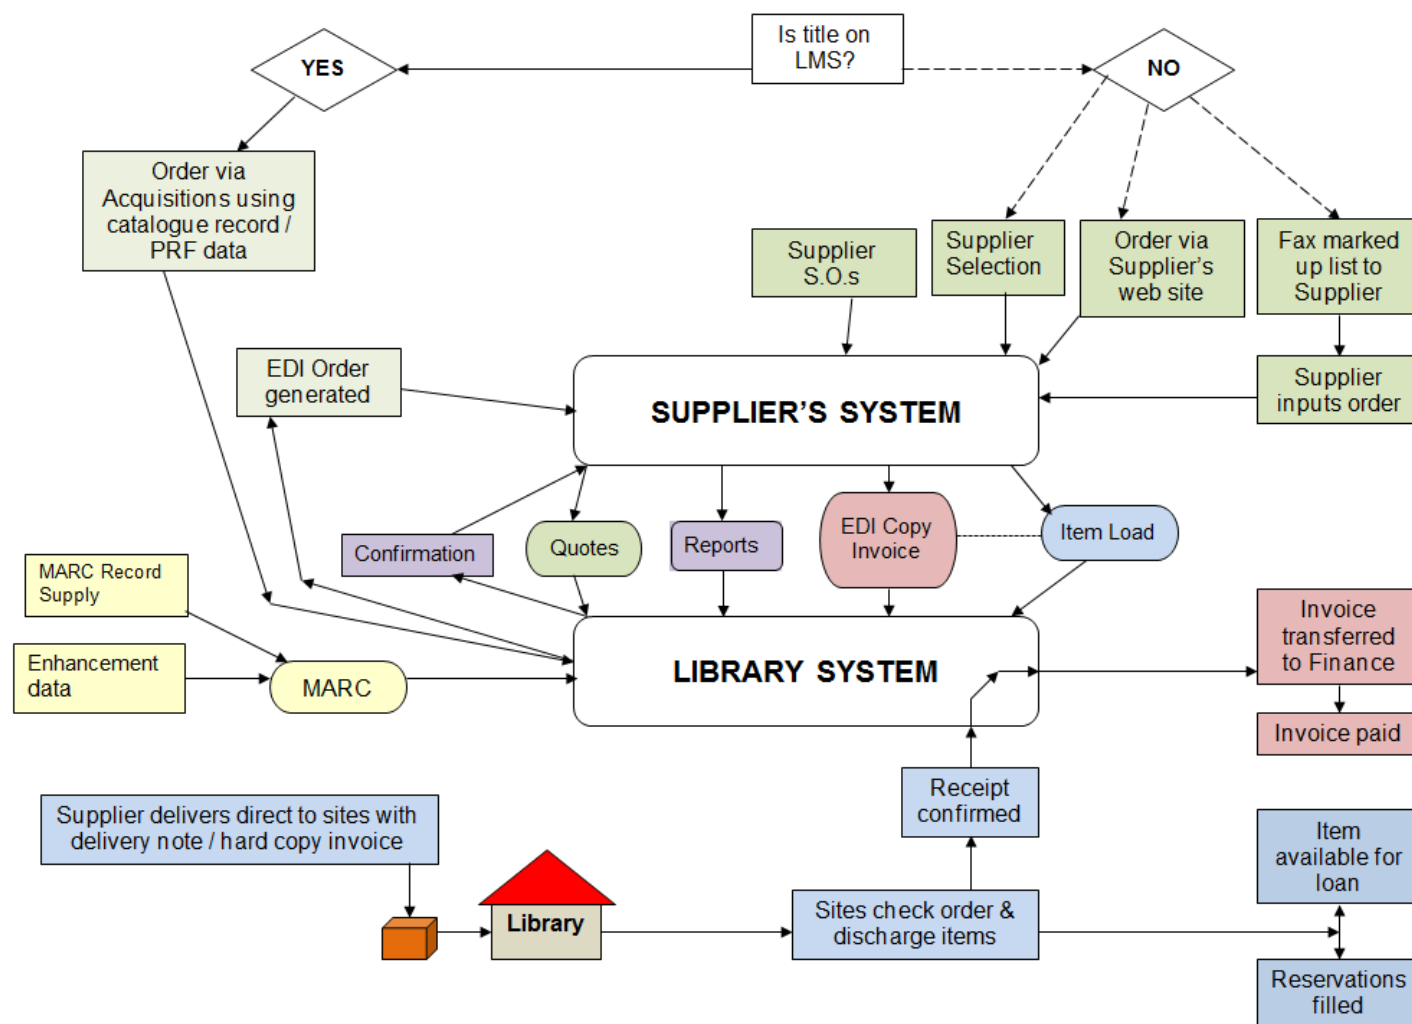

EDI & Enriched Metadata – BIC Breakfast

- **Acknowledgements**

- Order Response message
 - Acknowledgements
 - Reports
- Keeps order records up to date
- Notifies dates of publication or reprinting
- Cancels unobtainable

EDI & Enriched Metadata – BIC Breakfast

Key Benefits

- Speed of supply
- Reduction of error
- Elimination of duplication
- Reduction of back office work
- Savings in staff time
- Technology
 - Further business aims
 - To reduce costs
- Reputation as forward-looking service

EDI & Enriched Metadata – BIC Breakfast

- **Other system improvements around EDI**

- Link to Corporate Finance system
- Cataloguing aspects of Quotes
 - Can only load order if Title on LMS - checks by ISBN
 - If match - loads order
 - If no match, MARC compatible record and loads order
- Catalogues need more

BOOK INDUSTRY COMMUNICATION LTD

Enriched Metadata

Unlocking the treasures of the library

Doug McMillan

VP Strategic Partnerships and Licensing

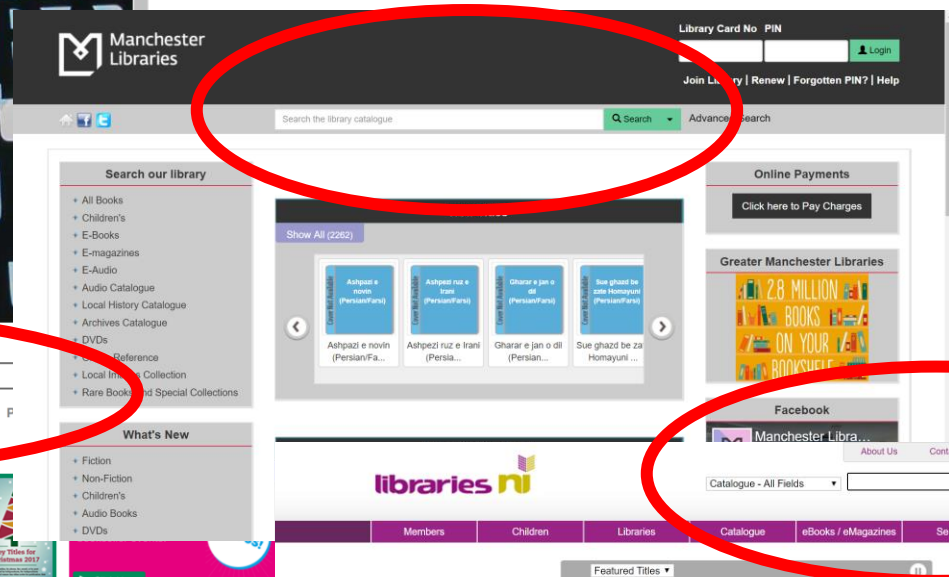

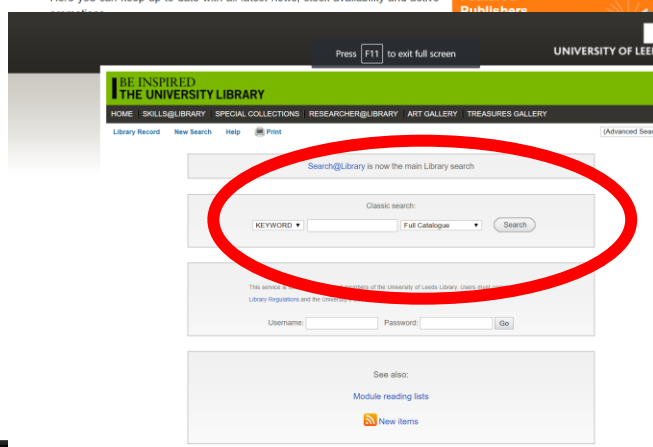

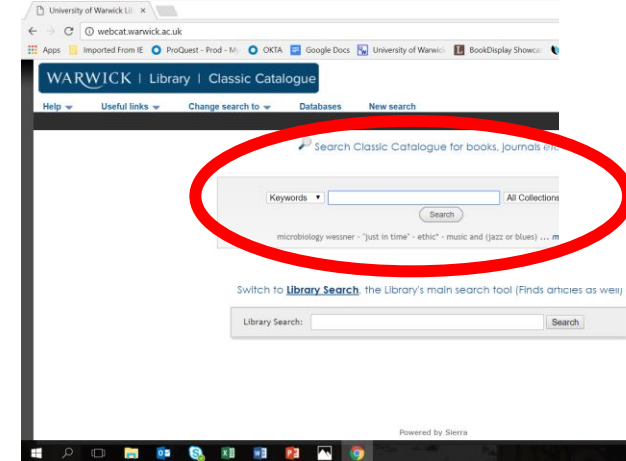

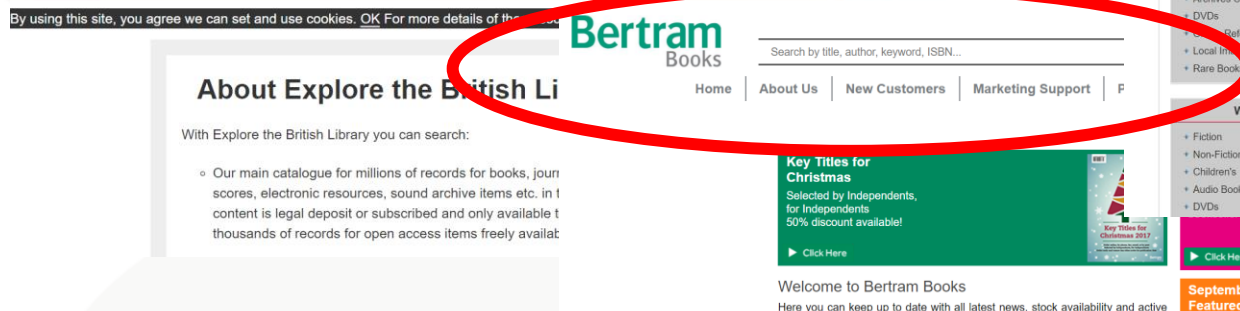

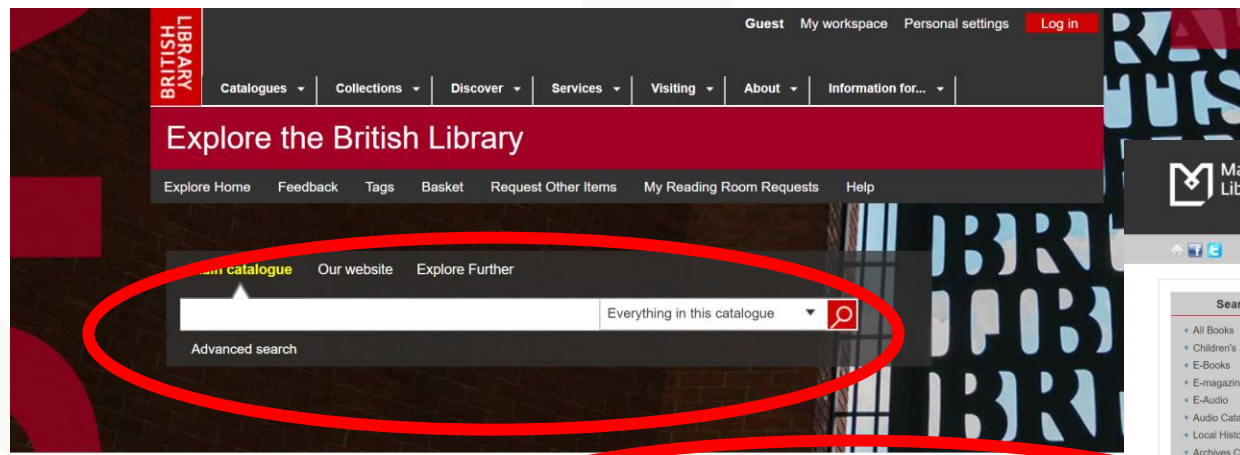

Core and Enriched Metadata

Mainframe to Windows

- Amazon launched in 1995 and consumers were looking at metadata for the first time – no longer just library reference desks and wholesaler warehouses
- To figure out what to borrow or buy online consumers needed to see the metadata
- Windows made it much easier to display data
- Libraries and booksellers quickly followed suit

Discovery

Search Engines

- Use metadata as an information retrieval system to connect searchers with content
- All words have a value
- Keywords and phrases are most important but searchable textual content also improves results
- Inclusion of enriched data at record detail level improves user experience and aids selection decisions

Enriched metadata sources

- Create accurate, current and rich Marc records
- Federated search / Discovery services / Linked data
- Access enriched content via APIs
- Access third party hosted enrichment data
- Combination of all of these...

Discover to Explore

- Discovery has been the buzz word for several years
- A lot of online library searches are for known items
- How can enriched data help encourage exploration of the collection, improve the user experience and drive issues/circulation/usage?
- Demos
- http://explore.bl.uk/primo_library/libweb/action/search.do?vid=BLVU1
- https://encore.cuyahogafallslibrary.org/iii/encore/record/C_Rb1470936_Sraven%20boys_Orightresult_U_X7?lang=eng&suite=def

Taking Libraries Beyond EDI

John Garrould

Head of IT, Connect Books

Using Web Services API's to move beyond EDI:

1. Web Service API's v EDI
2. What's the difference between BIC LCF and BIC Library Web Services?
3. BIC Library Web Services development project
4. The need for standards / Bertrams experience implementing
5. Next steps

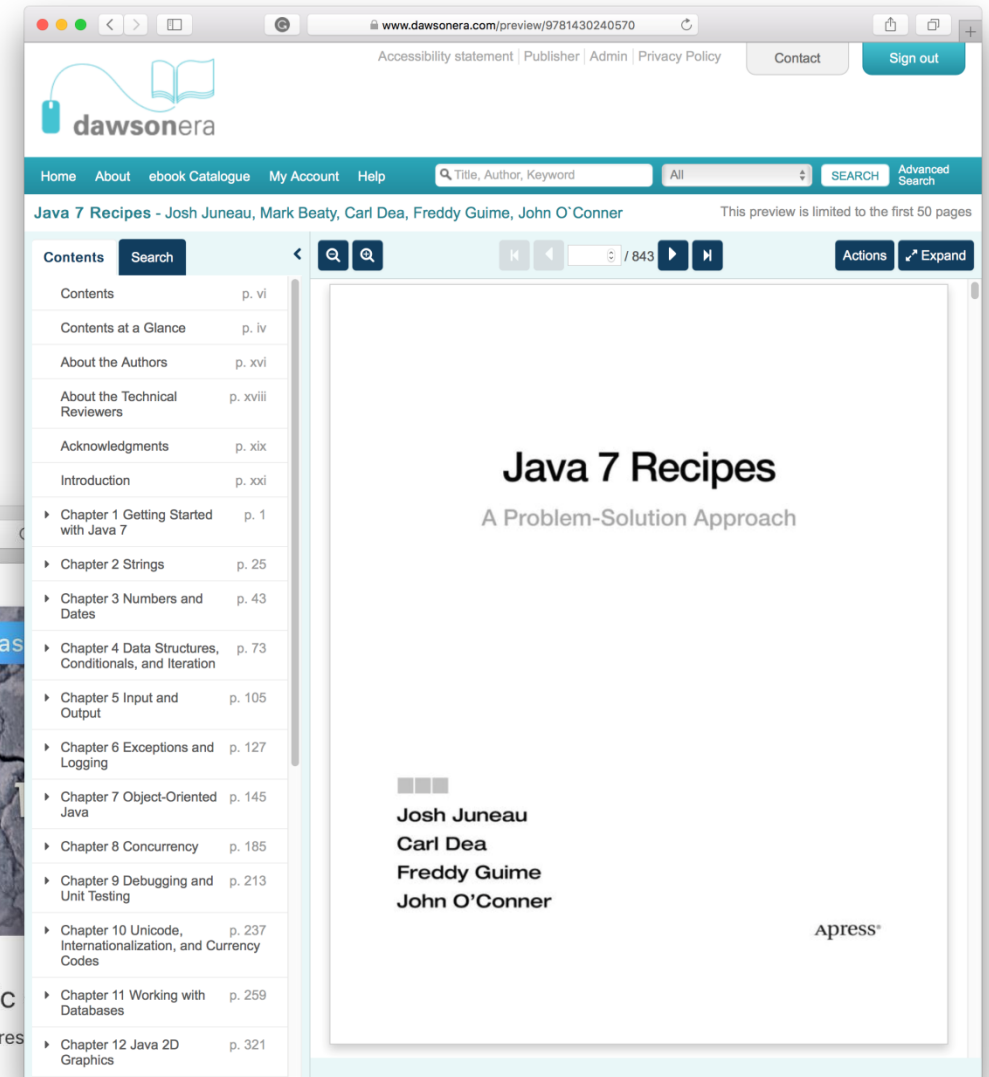

Web Service API's v EDI in a nutshell:

- Web Services (SOAP, XML, REST, JSON) are faster and cheaper to implement
 - Lower cost technology stack
 - API's are described by a machine readable schema that can be used to generate code, and validate messages before they are sent and on receipt.
 - Current technology – IT Graduates will have studied Web Services and other forms of RMI, but are unlikely to have even heard of EDI.
 - See the *BIC Realtime* Implementation Guide for a worked example showing an EDI implementation costing £37k v the same implementation using API's costing £10k

Web Service API's v EDI in a nutshell:

- Web Service API's can operate in real-time
 - EDI Quotes to Order cycle at best takes 1 to 2 hours and more frequently > 24hrs
 - The new generation of users have grown up with the web, iTunes, Amazon, Kindle and eBooks, they expect immediate service and seamless integration.
 - EDI survives because its batch nature is OK for physical products BUT not fit for purpose in digital supply chains.

What's the difference between BIC LCF and BIC Library Web Services?

1. LCF (Library Communications Framework)

Scope: Connecting the LMS with other systems running within the library's own network, e.g. Self Service Terminals, RFID, NFC, etc.

LCF can also be considered to address Patron Facing use-cases.

There are a few grey areas where it is not clear if a requirement sits in the LCF or BIC Web Services Projects. For example Inter-Library-Loans (ILL). These will be resolved by the BIC Libraries Committee on a case-by-case basis.

2. BIC Library Web Services API's

Scope: Connecting the LMS with external suppliers of content (both physical and digital) and metadata.

BIC Library Web Services development project

The working group has agreed that a BIC Industry standard API has agreed to give priority to real-time API replacement for the current EDI messages:

1. Price and Availability
2. Quotes
3. Order & Order Response
4. Despatch / Fulfilments
5. Invoice
6. Credit

Why?

1. The need to support digital media fulfilment in real-time (music, video, books, knowledge bases)
2. To address the proliferation of proprietary API's which are being established in the absence of an industry standard.

Approach:

1. Documents which will only be used by the LMS will be based on EDItX, with JSON versions also available.
2. This allows us to address the bloated nature of the current EDI messages, where library requirements have had to be squeezed into TRADACOMS and EDIFACT standard messages.
3. For the Invoice and Credit we will investigate using the OASIS UBL (Universal Business Language) Invoice and Credit. These are more likely to be supported by ERP / Financial Systems vendors such as SAP, Agresso, Oracle, etc. and offer better interoperability with EU PEPPOL.

The need for standards / Bertrams experience implementing

Why?

1. The need to support digital media fulfilment in real-time (music, video, books, knowledge bases)
2. To address the proliferation of proprietary API's which are being established in the absence of an industry standard.

Libraries Ireland wanted to use a modern alternative to EDI so required the use of API's instead of EDI.

In the absence of an industry standard the chosen LMS vendors set of proprietary API's were used to integrate Bertrams and their LMS.

RESTful APIs to Extend Functionality

Data flows in and out of Sierra for an integrated and seamless user experience without the complication of detailed software coding. Sierra customers are using well-tested Sierra RESTful APIs to free up bibliographic, authority, patron, and transactional data. Library users benefit from integration with library discovery tools, courseware, virtual learning spaces, social media, "hot author" holds, and other web services.

	ISBN/EAN	Author	Title	Publisher	Dewey	Format	Total Qty	Price	Line Price	Template	
<input type="checkbox"/>	5024952962150 ()		Mr Men and Little Miss: Mr Bump goes on a trip and 12 other	Delta Home Entertainment		DVD	1	£ 4.08	£ 4.08		Show line Remove line
<input type="checkbox"/>	5024952962327 ()		Mr Men and Little Miss: A job for Little Miss Giggles and 12	Delta Home Entertainment		DVD	1	£ 4.08	£ 4.08		Show line Remove line

2 items found, displaying all items. Page 1

Line A

Line B

In this example the customer has built a small basket containing two lines.

They are now ready to place this order with Bertrams, so they click through to Basket Management.....

HomeBooksAudio VisualMy AccountBasket ManagementOrder Mana

Active BasketsTemplatesForwardedMergedSubmittedArchived

[←](#) Results > [Basket List](#) > [Basket](#) > [Basket List](#) > [Basket](#) > [Basket List](#) [→](#)

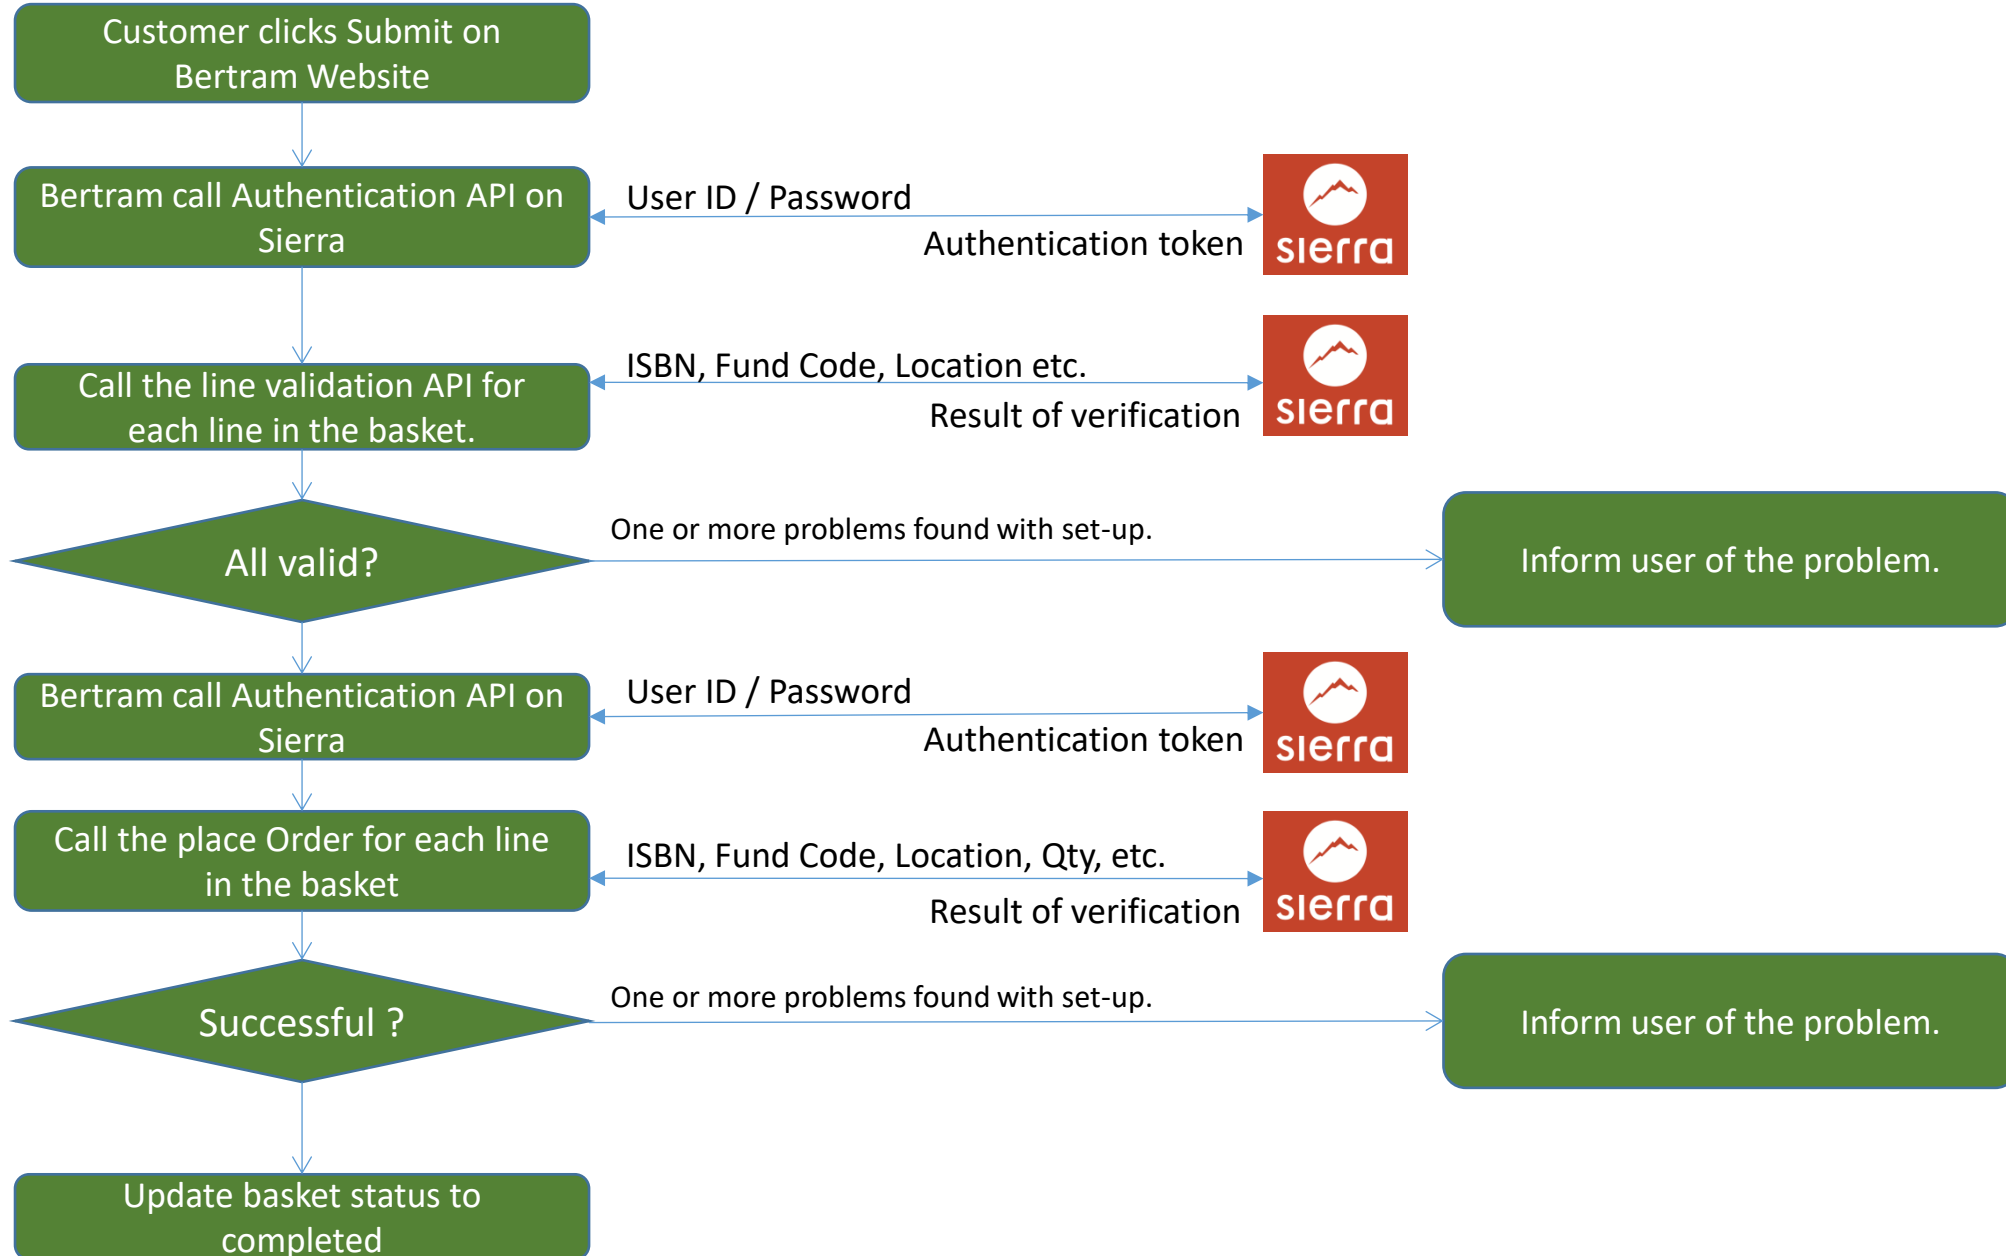

Basket Management

	Name	Basket Price	Sent By					
<input type="checkbox"/>	testing	£ 6.96		Edit	Archive	Delete	Reports	Submit
<input type="checkbox"/>	test basket	£ 8.16		Edit	Archive	Delete	Reports	Submit

The customer clicks on the Submit button and this then starts the real-time interaction with their LMS, powered by a set of API calls.

In the past this would have triggered an EDI Quote to be sent...received...processed...EDI Order sent...received....processed.

VH	1	adlit400	Juvenile Fiction	£4.08	.o10004136x	

Total volumes: 1 Total value: £4.08

From end-to-end, the basket has been built, approved on the LMS, and PO Number returned to Bertrams, all in under one minute.

Conclusion and call to action....

- The Irish Libraries use of API's with Sierra is a brilliant example of the technology and very forward looking. They should be commended for taking this step.
- The use of proprietary API's instead of standard EDI is NOT economically viable.... it would cost too much to do a dozen or more API implementations for different LMS vendors and then have to support them.
- Please get involved in the BIC Library Web Services Project. Make sure it covers your requirements.
- Make sure that tender documents are specific and ask for "BIC Compatible EDI Messages" or "BIC Compatible Library Web Service API's", not just EDI or API's.
- Systems Vendors and Systems Integrators should have current BIC Supply Chain Accreditation.
