

Breakfasts 2015

Welcome to October's BIC Breakfast:
Embracing the Library
Communication Framework (LCF)

This BIC Breakfast, and the ongoing marketing and promotion of LCF, is funded by The LCF Consortium

The LCF Consortium

This BIC Breakfast and the ongoing marketing and promotion of LCF is being funded by the following organisations who are all part of the LCF consortium

A close-up photograph of a breakfast meal. In the center, a sunny-side-up fried egg is garnished with fresh green herbs. To its left, a slice of tomato is visible. Above the egg, two sausages are cooked to a golden-brown color. To the right, several strips of bacon are cooked and slightly curled. The entire meal is presented on a white plate.

What is a BIC Breakfast?

Over to Mick...

Embracing the Library Communication Framework

Episode one – Why did we do it?

Mick Fortune - Consultant

First - a word about SIP

"I'm right there in the room, and no one even acknowledges me."

“Standard Interchange Protocol” (SIP)

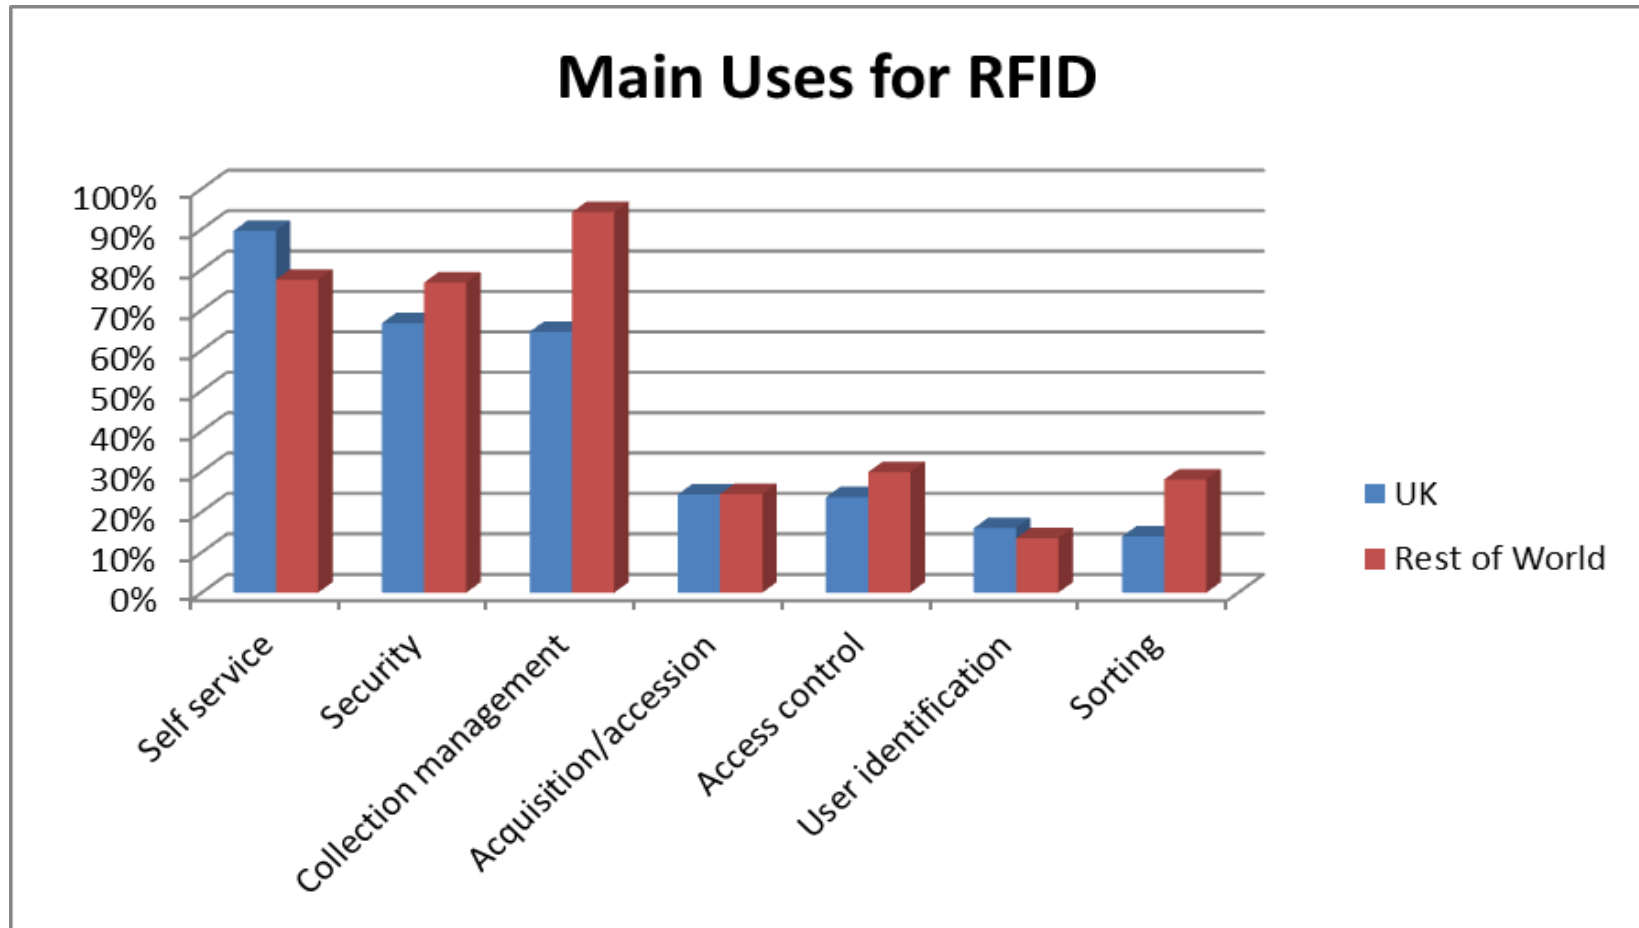

- Published by 3M[®] in 1993.
- Became a *de facto* standard for LMS/3rd party communications.
- Originally developed to promote 3M’s self-service solutions.
- Modified to accommodate new technologies and “non-standard”, unregulated data exchange.
- Circulation remains its main focus.

SIP still dominates the RFID library landscape...

Numbers of libraries in 2014 survey using SIP, API or both

...and limits innovation in the RFID market.

The need for change

- SIP's lack of regulation has made it unwieldy and difficult to use over its 20+ year history.
- The adoption of a standard UK data model for RFID offered an opportunity to use more data more creatively.
- New devices like smartphones and tablets – undreamed of in 1993 – have appeared that can interact directly with RFID tags.

Finding a solution

- SIP's longevity and the many legacy systems that use it make its wholesale change very difficult.
- Many providers, frustrated by SIP's limitations have already developed bilateral communications between a LMS and 3rd party applications.
- The triple challenge was to find a way to accommodate legacy systems while encouraging innovation – all in an open environment.

The Answer!

- The Library Communication Framework
- Developed by an independent body - BIC
- Extends the capabilities of SIP2..
- (Hopefully) Dissuades the growth of proprietary solutions.
- Open to all.

CAPITA

BIC Breakfast

Embracing the Library Communication Framework (LCF)

Anthony Whitford

Head of Development, Capita libraries

What is the Library Communication Framework?

Functional

Emerging Standard

Internet Standards

Opportunity

Logical Entities

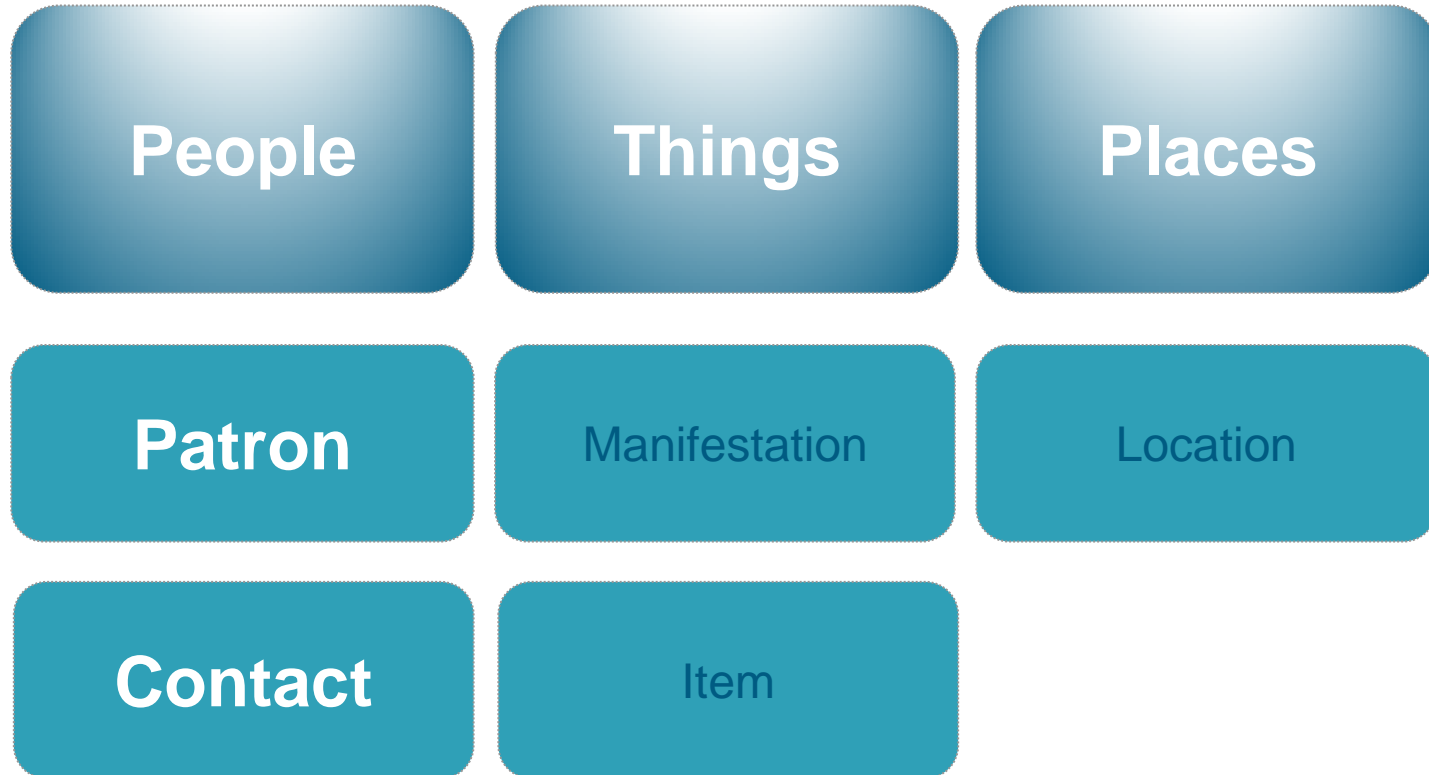

Flexible

Well Documented

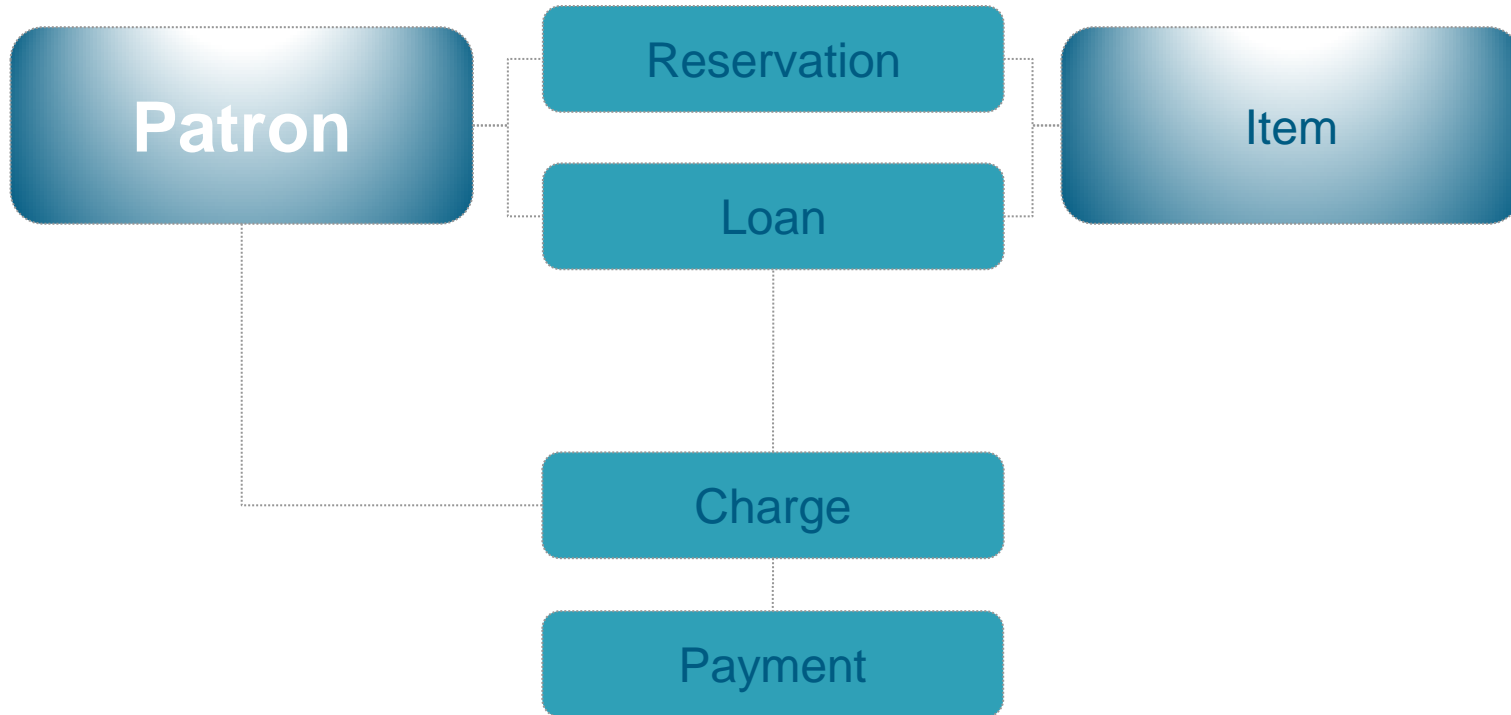

A touch of design

- **LCF Entity Model**
 - Describes the library ecosystem
 - Draws on previous experience
 - SIP2
 - ONIX
 - NCIP

A touch of design – primary entities

A touch of design - relationships

A touch of implementation

- **Web Service or web service**
 - SOAP vs. REST
- **REST**
 - Making the most benefit from Internet Technology
 - Low technical barrier for use
 - Graph of connected entities
 - Secure
 - Proven

A touch of implementation

- An example URL to GET a list of Contacts
 - <http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts>
- Results in XML describing the available Contacts, by URI

```
<lcf-entity-list-response xmlns:ns2="http://a9.com/-/spec/opensearch/1.1/"
xmlns="http://ns.bic.org.uk/lcf/1.0" version="1.0">
  <entity-type>contact</entity-type>
  <ns2:totalResults>0</ns2:totalResults>
  <ns2:itemsPerPage>50</ns2:itemsPerPage>
  <ns2:startIndex>0</ns2:startIndex>
  <entity href="http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/DEFAULT"/>
  <entity href="http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000001"/>
  <entity href="http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000003"/>
  <entity href="http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000002"/>
</lcf-entity-list-response>
```

A touch of implementation

- To get the detail of one Contact, just invoke the URI you were given

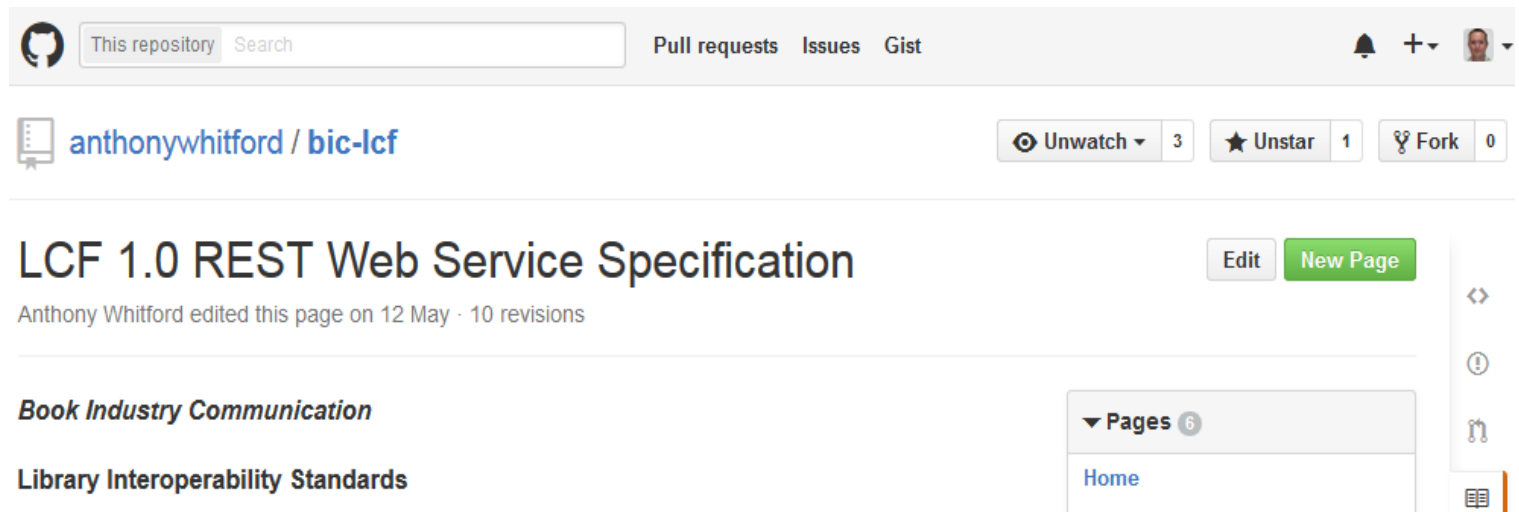

[http://dev-](http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000001)

[ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000001](http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/contacts/00000001)

```
<contact xmlns:ns2="http://a9.com/-/spec/opensource/1.1/"  
xmlns="http://ns.bic.org.uk/lcf/1.0">  
  <identifier>00000001</identifier>  
  <name>Borrower</name>  
  <patron-ref>  
    http://dev-ci.kc.caplib/TalisSOA/protocols/lcf/1.0/patrons/00000001  
  </patron-ref>  
  <address-line>20 Cherry Road</address-line>  
  <address-line>Islington</address-line>  
  <address-line>Wolverhampton</address-line>  
  <address-line>Greater Birmingham</address-line>  
  <communication-detail>  
    <communication-type>05</communication-type>  
    <locator>broken.borrower@university.ac.uk</locator>  
  </communication-detail>  
  <language>eng</language>  
</contact>
```

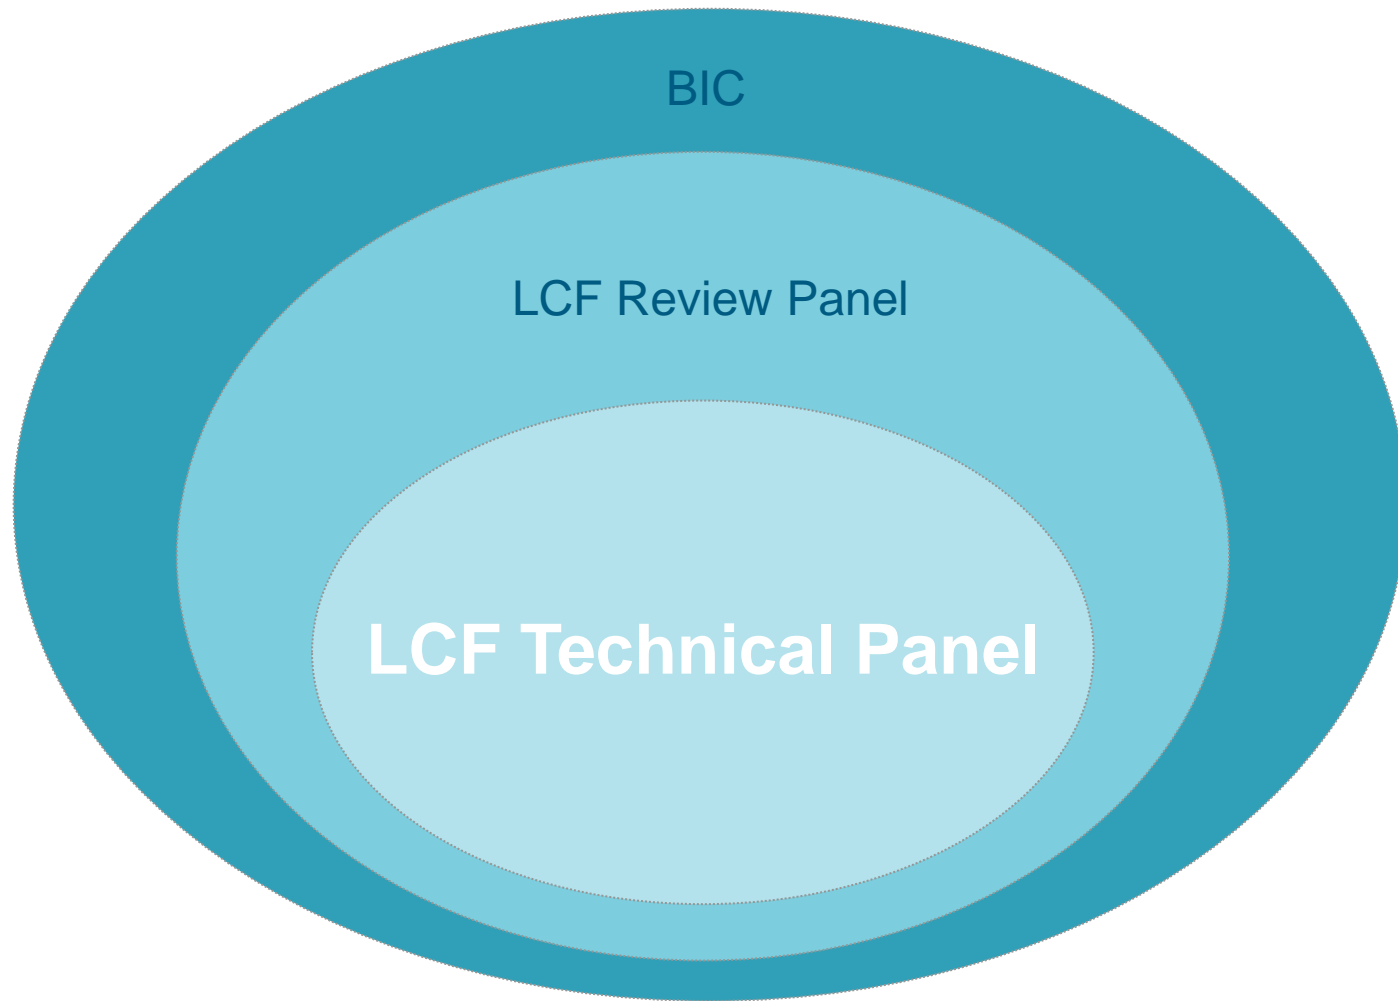

A touch of implementation

- The RESTful web service scheme is documented
- Describes the interactions for each entity
 - How you should create, read, update and delete
 - How you should create interaction entities
 - Includes common interaction patterns

The screenshot shows a GitHub repository page for 'anthonywhitford / bic-lcf'. The repository name is 'bic-lcf' and the owner is 'anthonywhitford'. The page title is 'LCF 1.0 REST Web Service Specification'. The page was last edited by Anthony Whitford on 12 May with 10 revisions. The page is part of a repository with 3 unwatched items, 1 unstarred item, and 0 forks. The page content includes the text 'Book Industry Communication' and 'Library Interoperability Standards'. A sidebar on the right shows a 'Pages' section with 6 pages, including 'Home'.

Governance

Resources

- Full Details are available on the BIC web site
 - <http://www.bic.org.uk/114/LCF/>

The screenshot shows the BIC website interface. At the top left is the BIC logo. The top right navigation bar includes links for HOME, ABOUT, and BLOG. Below the navigation is a blue banner with the text "Book Industry Communication" and the tagline "the book industry's supply chain organisation". A red arrow icon with the text "FIND YOUR LOCAL BOOKSHOP" is also present. On the left side, there is a vertical menu with buttons for "About BIC", "Why become a member?", "Committees - Groups - Clinics", "Projects tracker", "BIC Training Courses", "BIC BATTLES (Debates)", and "BIC Open Days". The main content area shows a breadcrumb trail "Home > LCF" and the title "LCF". Below the title is the heading "LCF: LIBRARY COMMUNICATIONS FRAMEWORK" and the publication date "Published 10th January 2014". The main text describes the LCF as a set of library interoperability standards for data communication between self-service and other library terminal applications.

Resources

- The development resources are available here:
 - <http://github.com/anthonywhitford/bic-lcf>

The screenshot shows a GitHub repository page for 'anthonywhitford / bic-lcf'. The repository name is displayed in the header, along with navigation links for 'Pull requests', 'Issues', and 'Gist'. Below the repository name, there are buttons for 'Unwatch', 'Unstar', and 'Fork'. The main content area features a 'FAQ' section with an 'Edit' button and a 'New Page' button. The FAQ text reads: '1. How do I become a contributor? The contributors to this project are currently, Anthony Whitford, Francis Cave and Matthew Dovey. If you belong to a BIC member organisation, please contact one of us or BIC directly. Not sure if your organisation is a BIC member? Please check here: <http://www.bic.org.uk/19/Members/>.' On the right side, there is a 'Pages' sidebar with a list of links: 'Home', 'FAQ', 'LCF 1.0 Information Entity XML bindings', 'LCF 1.0 REST Web Service Specification', 'LCF Code Lists', and 'LCF Version 1.0'.

What's next?

Opportunity

Over to Catherine..

City of Westminster

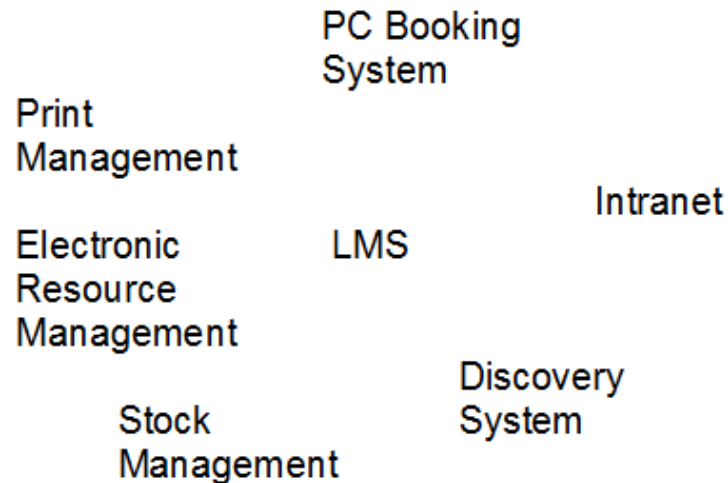

BIC Breakfast Embracing the Library Communication Framework (LCF)

Now What?

Catherine Cooke, Westminster Libraries

ccooke@westminster.gov.uk

- What does it actually mean for the library customer?

- Track customers' usage, provide specific facilities to specific groups of users, encourage people actually to join to access your services

SIP2 Extensions
APIs
Proprietary

- The Library Communication Framework (LCF)
 - concentrates on the functionality required to deliver a service
 - ensures the data and values that need to be exchanged are standardised
 - establishes common terms of reference
- Libraries are at the mercy of their suppliers again!
- Now is the time for Libraries to stand up for LCF and beg, *desire*, ***demand*** it

- Insisting our suppliers use the framework is our best guarantee of the continuing functionality of our systems into the future
- Procuring
 - a new LMS?
 - new RFID system?
 - new PC Booking?
 - e-book service?
- Ensure your new system is using the up-to-date, comprehensive and widely recognised standard
- Include LCF compliance as a mandatory requirement

Questions to ask - General

- Please state your level of commitment to the Library Communication Framework (LCF)
- Please show how this is demonstrated in your future product development plans
- What specific functionality are you currently offering that uses LCF?
- Please provide details of sites using these

Questions to ask - Specific

- What specific functionality have you achieved using integration unique to *<insert current LMS / RFID system as required>* (i.e. using APIs and / or custom code as opposed to open standards)?
- What services and costs might we have to budget for should we migrate to a different *LMS / RFID system* in the future?

- Coming in quarter 1 2016 - the new Accreditation Scheme – replacing the old e4Libraries scheme

e4libraries

- Aimed at Libraries, Suppliers and Aggregators
- Basic questions about suppliers' policy towards and compliancy with LCF
- Ask that your prospective suppliers have BIC Accreditation

- Are you asking for a new service from your existing suppliers?
 - Your e-book service authenticating to your LMS?
 - Fees and charges from your PC Booking or Print Management system into your LMS?
 - Messages from your LMS to your PC Booking system
 - Welcome Mr. Smith – your books are due back today
 - – the book you requested is ready for you
 - – you owe £2.50
- Ask for the integration to be done using LCF

- The development of new services will be easier and therefore faster
- Hopefully therefore cheaper!
- If suppliers haven't got to rewrite the same functionality for every LMS their customers use, they can spend more time developing new functionality and enhanced services
- Open systems represent Best Value. They give us freedom of choice, we aren't locked into one solution set, and that drives down costs. It keeps suppliers on their toes!
- We will protect our investment in technology, maximise the return on it and ensure its continuing functionality

- LCF is intended to support a much needed rationalisation of the interoperation between disparate IT solutions. In a time of scarce resources libraries are actively seeking to improve both their existing solutions and to offer new services without the risk of buying into solutions that cannot be developed or transported to a new platform. LCF provides that possibility.
